

ACRS World Conference
ONLINE
 July 16-19, 2020

Is a Self-Help Web-Based ACT Intervention More Effective Than Bibliotherapy in the Management of Chronic Pain?

Marie-Eve Martel, Psy.D., Ph.D.(c), Frédérick Dionne, Ph.D.
 & M. Gabrielle Pagé, Ph.D.

Chronic Pain in the World

- The leading cause of disability and disease burden in the world
- Estimates suggest that globally, 1 in 5 adults suffers from chronic pain
- Increased risk of developing
 - mood disorders
 - anxiety disorders
 - substance use problems
- Risk of suicide twice as high

 Hootman et al., 2006; Hedberg & Nelson, 2002; WHO, n.d.; Zemanchova et al., 2007; Yang & Cohen, 2006; Yang et al., 2012
 Martel, Dionne, & Pagé, 2020

ACT, an established treatment for pain

- Acceptance and Commitment Therapy (ACT) is a stand-alone treatment
- Well-established treatment for chronic pain in general (including numerous conditions) – Division 12 (APA)

Empirical Review Status	STRENGTH OF RESEARCH SUPPORT		
	Strong	Modest	Controversial
2015 Criteria (Tolin et al. Recommendation)	Treatment pending re-evaluation		
1998 Criteria (Chambless et al. EST)	Strong ✓	Modest	Controversial

 Martel, Dionne, & Pagé, 2020

Accessibility Remains a Major Challenge

- Long wait lists
- Distance from major cities
- Difficulties linked to mobility or transportation
- Costs associated with treatment (\$)
- Lack of qualified professionals
- Stigma
- Current barriers to face-to-face treatment due to Covid-19

Marras, Orsini, & Page, 2020

What is a Self-Help?

- "Self-administered" and based on "evidence-based treatment" (New, 2004)
- "Guide and encourage the patient to make changes... rather than just provide information" (Anderson et al., 2005, p. 887)

Level of guidance of therapy	Present study
1. Self-Administered	
2. Predominantly Self-Help	✓
3. Minimal Contact	
4. Predominantly Therapist-Administered

Various Self-Help Formats for Chronic Pain

- **Bibliotherapy**
 - Vaillette et al. (2019), Johnson et al. (2020), Thorsell et al. (2011)
- **Applications on mobile phones**
 - Rognmoeller et al. (2013), Seppäläinen et al. (2013)
- **Web-based**
 - Fildes et al. (2010), Johnson et al. (2014), Sullivan et al. (2018), Liu et al. (2017), Scott et al. (2018), Seiderer et al. (2018), Bulhman et al. (2013), Trompeter et al. (2014)

Marras, Orsini, & Page, 2020

Current Gaps in the Literature

- Effectiveness results based on ACT **self-help cannot be fully generalized** and **further research** is required
- While self-help are well disseminated, there is criticism about **over-claiming empirical support** for published self-help books
- Results based on **format** (book vs web-based) of intervention remain unclear
- More research is needed to better understand **psychological processes** associated with outcomes and **long-term benefits**

Wessely, M., & Taylor, S. (2010). Psychological processes associated with outcomes and long-term benefits. *Journal of Clinical Psychology, 66*, 1-10. doi:10.1111/j.1471-6402.2010.02500.x

Aim of the Current Study

Evaluate **whether guided self-help programs based on ACT** result in greater change in the reduction of disability (primary), anxiety/depression and improvement of quality of life (secondary variables) among people suffering from chronic pain

- 1) ACT Web-based > Education
- 2) ACT Bibliotherapy > Education
- 3) Web-based > Bibliotherapy

Wessely, M., & Taylor, S. (2010). Psychological processes associated with outcomes and long-term benefits. *Journal of Clinical Psychology, 66*, 1-10. doi:10.1111/j.1471-6402.2010.02500.x

Method: Trial Design

- Randomized-controlled trial (RCT) comparing two experimental ACT groups to an active control group (education)
- 3-armed – parallel groups
- The intervention was over a period of 9 weeks
- Longitudinal with repeated measures
 - pre, post, 3 and 6 months
 - 11 weekly measures (7 diary items)

Wessely, M., & Taylor, S. (2010). Psychological processes associated with outcomes and long-term benefits. *Journal of Clinical Psychology, 66*, 1-10. doi:10.1111/j.1471-6402.2010.02500.x

Method: Approval and Ethics

- Ethics certificate CDERS-17-11-06.05 (Feb 5, 2018)
- Registration on Clinicaltrials.gov – NCT03711851 (20 Oct. 2018)
- Consort-ehealth statement was followed to ensure optimal reporting of the protocol (Eysenbach et al., 2011)

Method, Overview, & Page, 2020

Method: Eligibility Criteria

- ✓ 18 years or older and residing in Canada
- ✓ Non-cancer related pain every day for at least 6 months
- ✓ Having an average pain level of at least 4/10 within the past week
- ✓ Reading and writing abilities equivalent or superior to grade 8
- ✓ Internet access at home as well as a valid e-mail address
- ✓ Never having taken part in an ACT therapy and/or practiced mindfulness meditation and/or having read the book used in the study
- ✓ Not being in an unstable psychological situation (e.g. severe suicidal thoughts)
- ✓ Stable medication for at least one month

Method, Overview, & Page, 2020

Method: level of guidance/blindness

 Weekly e-mails: Monday AM for a total of 9 weeks

 Access to research assistants for questions

 2 phone calls (Week 9 and 4), minimal contact

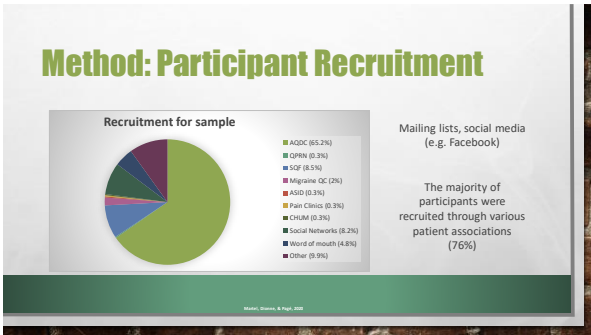

Blind	Present study
Participant	Not possible
Co-intervention (assistant researcher)	Difficult
Data analysis	✓

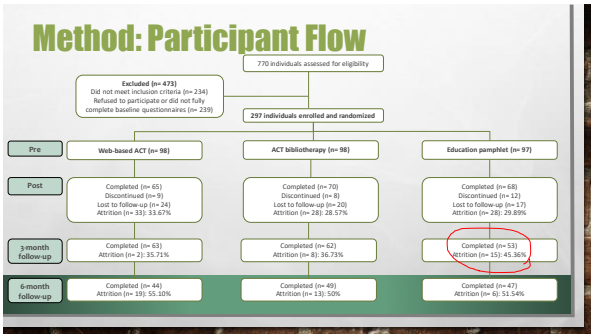

Method, Overview, & Page, 2020

Week	WEB-BASED	BIBLIOTHERAPY	EDUCATION
1	Module 1: Psychoeducation about pain and information about ACT approach	Chapters 1 to 4: Psychoeducation about pain and information about ACT approach	Chronic pain: recognizing and treating it; how to speak to your doctor
2	Module 2: Reinforcing your deepest values	Chapter 11: Values	Don't stay alone in the face of pain! Information for families and friends
3	Module 3: Learn to meditate	Chapter 5: Present-moment awareness	Controlling your breath to reduce your pain: a solution for all
4	Module 4: Committed action	Chapters 6 and 7: Committed action	Physical activity to reduce pain... essential to treatment! Sexuality and intimacy
5		One week break	
6	Module 5: Willingness to feel pain	Chapters 8 and 13: Willingness to feel pain	When emotions get involved...
7	Module 6: Defuse from your negative thoughts	Chapters 9-10: Defuse from your negative thoughts	To finish with alcohol
8	Module 7: Finding the right balance in your activities	Chapter 12: Finding the right balance in your activities	Managing your energy to better control your pain... Nutrition and chronic pain
9	Module 8: Conclusion: it's just the beginning	Chapters 14, 15 and Conclusion: it's just the beginning	Adopt good sleep habits. Everything you need to know about pain medication

RESULTS

Sociodemographic Information	Web-based (n = 96)	Blibliotherapy (n = 96)	Education (n = 97)
Age	M (SD)	M (SD)	M (SD)
	50.97 (11.25)	50.85 (11.67)	51.37 (11.81)
Gender			
Women	86 (89.6%)	91 (95.8%)	86 (88.6%)
Men	10 (10.4%)	5 (5.2%)	11 (11.4%)
Ethnicity			
White/Caucasian	91 (94.8%)	87 (90.7%)	87 (89.6%)
Black			1 (1%)
Other/Hispanic/Latino/Asian	3 (3.1%)	3 (3.1%)	1 (1%)
Hispanic	2 (2.1%)	-	2 (2.1%)
Asian	1 (1%)	-	-
Level of Education			
High School	16 (16.7%)	21 (21.9%)	23 (23.6%)
College/Junior or College	46 (47.9%)	49 (51.0%)	37 (38.2%)
University (Bachelor's degree)	24 (24.9%)	29 (30.2%)	27 (28.1%)
University (Graduate)	10 (10.5%)	9 (9.5%)	9 (9.4%)

Marckl, Shuman, & Page, 2020

RESULTS

Sociodemographic Information	Web-based (n = 96)	Blibliotherapy (n = 96)	Education (n = 97)
Level of chronic pain			
Neuropathic (regional)	2.0	6.1	11.5
Fibromyalgia	37.6	39.4	44.8
Back pain	11.2	12.1	12.5
Head pain	7.1	4.0	3.1
Neuropathic Pain	6.2	7.1	1.1
Myofascial Pain	16.3	6.1	12.5
Arthritis	5.1	5.1	1.0
Chronic Pain/Surgical Pain	1.0	3.0	3.1
Complex Regional Pain Syndrome	2.0	4.0	-
Other	9.2	13.1	9.4
Current with			
Yes	34.7	40.8	47.9
Diagnosed with history of regional medical disorder			
Yes	37.6	39.3	31.6

Marckl, Shuman, & Page, 2020

RESULTS

PRIMARY OUTCOME: PAIN DISABILITY

- Results of MLM showed a significant interaction effect group*time: $F(4, 395.75) = 4.22, p = .002^*$ in favor of the ACT bibliotherapy group
- Subsequent analyses directly comparing each group and time points revealed that from pre to post, the ACT bibliotherapy group showed greater reductions in BPI scores than the education group ($[149.03] = 3.138, p = .002^*$) and the web-based ACT group ($[164.81] = 2.308, p = .022^*$)
- Differences were also significant between pre-test and the 3-month follow-up, again with the ACT bibliotherapy group showing greater reductions in BPI scores than the education group ($[140.15] = 2.85, p = .005^*$) and the web-based ACT group ($[115.10] = 2.64, p = .009^*$)
- No statistically significant differences were found between post test and 3-month follow-up (results were maintained)

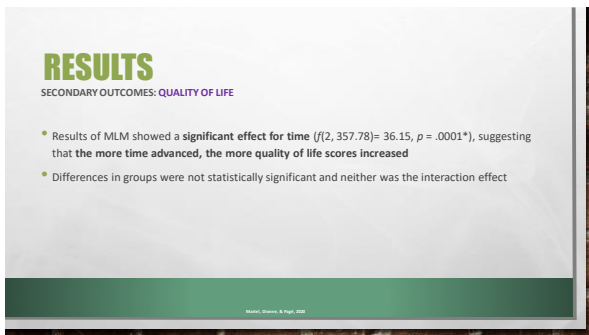

Marckl, Shuman, & Page, 2020

A word on adherence...

EVALUATION DE LA PARTICIPATION AU PROGRAMME

Dans l'ensemble, combien de semaines du programme estimé-vous avoir complétées?

1	2	3	4	5	6	7	8
Web-based ACT	ACT bibliotherapy	Education					

7.18 6.82 7.39*

- Results from a One-way ANOVA showed that participants in the education group participated significantly more than participants in the ACT bibliotherapy group ($F(2, 173) = 4.02, p = .02$)

Manuel, Simons, & Page, 2018

DISCUSSION

- In sum, all three self-help programs showed improvements from pre to post for
 - Pain-related disability
 - Anxiety and depression
 - Quality of life
- ACT bibliotherapy showed greater reductions in pain disability and anxiety but not on depression or quality of life
- Web-based ACT was not more effective than ACT bibliotherapy or education on pain

Manuel, Simons, & Page, 2018

DISCUSSION

Study strengths:

- Comparison of two treatment formats (web vs. book)
- Large sample size (N= 297)
- Active control group
- Statistical analyses (Mixed Linear Models)

Limitations:

- Sample from the community, mostly women, average age of 50
- No "blindness" for participants or research assistants
- Variation in the amount of content
- Self-report measures and adherence to treatment was self-reported
- High attrition rate ($\geq 50\%$)

Manuel, Simons, & Page, 2018

Future Directions

Analyze longitudinal data for the study (diary items) and process variables

- Identify and describe trajectories of change (6) in disability during the intervention
- Identify characteristics and baseline predictors of trajectory membership
- Identify trajectory groups associated with greater/poorer outcomes

Marcel, Dennis, & Page, 2018
