Target: \_\_\_\_\_

Behaviors of Interest	Excess? or Deficit?	

Operational Definition of \_\_\_\_\_ (pick one of the above behaviors)

Can a teddy bear do it? \_\_\_\_\_ If no, continue. If yes, rephrase.

Is it... Measurable? \_\_\_\_\_ Observable \_\_\_\_\_ Repeatable? \_\_\_\_\_ If yes, continue. If no, rephrase.

What will you measure? Frequency \_\_\_\_\_ Duration \_\_\_\_\_ Latency \_\_\_\_\_ Intensity \_\_\_\_\_ Inter-response Time? \_\_\_\_\_

How will you collect data?

Is a within series design possible (i.e., can you change the context multiple times and expect behavior to change)? \_\_\_\_\_ (see also the decision tree from Hayes, Barlow, & Nelson-Gray, 1999)

If so, which works best? Withdrawal, Changing Criterion, Parametric, Periodic treatment

Describe the procedures for this design – how will you know if you have an effect & control ?

Is a between series design possible? \_\_\_\_\_ (see also the decision tree from Hayes, Barlow, & Nelson Gray, 1999)

If so, which works best? alternating treatments, simultaneous treatment, multiple baseline

Describe the procedures for this design – how will you know if you have an effect & control?

Could you combine multiple elements to make the design even stronger?

Describe the procedures for this design – how will you know if you have an effect & control?
