...Where Angels Fear to Tread

THE HIDDEN THIRD

Schlaepfer et al., 2012

What Constitutes Treatment Resistant?

Anxiety Disorder Association of America

•“...when there are residual symptoms or when symptoms do not improve at all after some form of therapeutic intervention.”

- Pollack et al., 2008

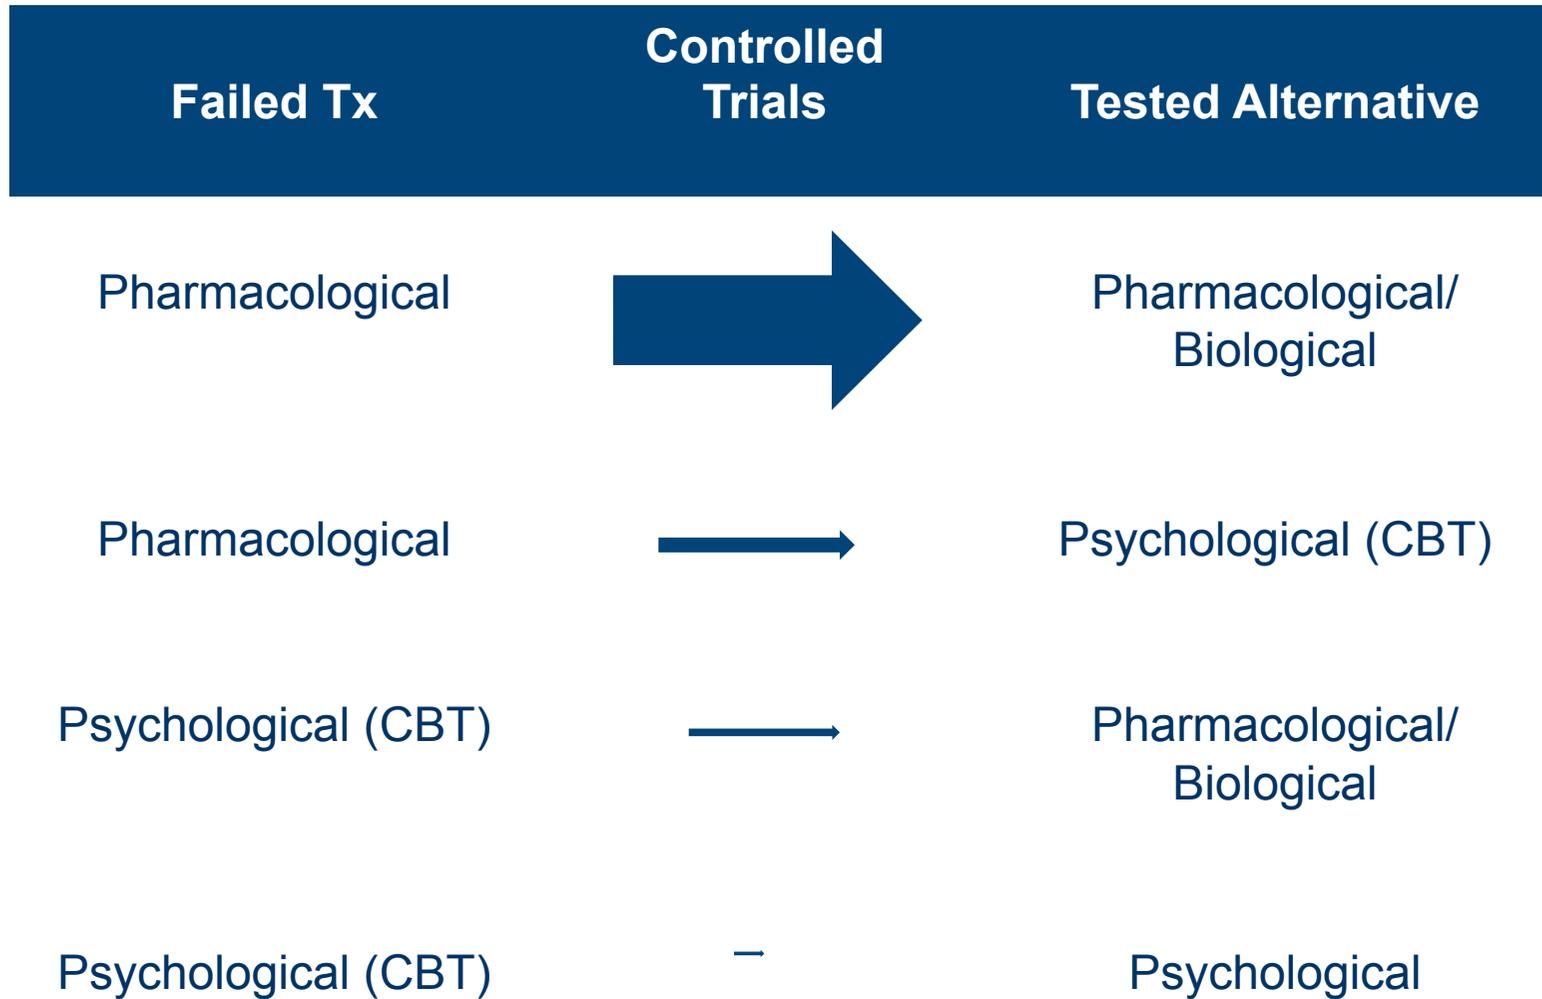

Research

- **When a priori response/ remission criteria are not met.**

Clinical/ Anecdotal

- **When the patient doesn't do what is necessary**
- **When I've run out of therapeutic options**

Level of Evidence: Overall

The Importance of Willingness During Exposure

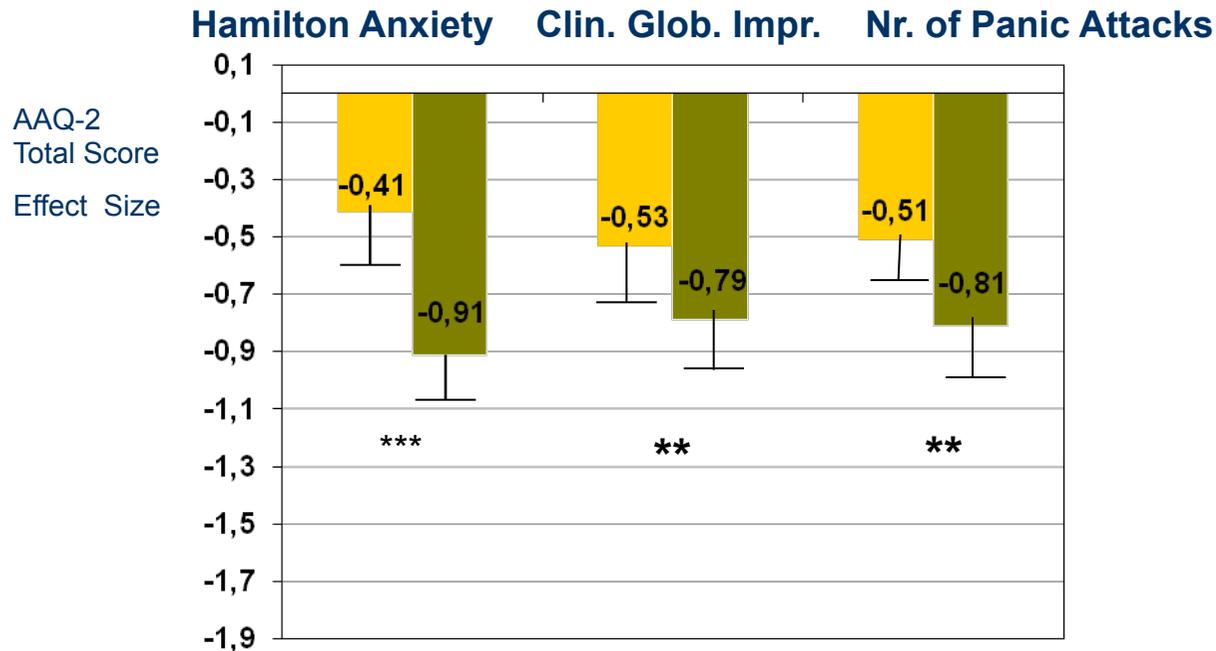

“How Willing Are You to Engage in Exposure”

**Those Who Drop Out of Treatment differ Significantly from Those that Complete the Exposure:
 $F(1,226) = 3.89, p < .05$**

Reaction to Anxiety Suggests Possible Process Relevant for Non-Responding Patients

Lower levels of psychological flexibility associated with a poorer response

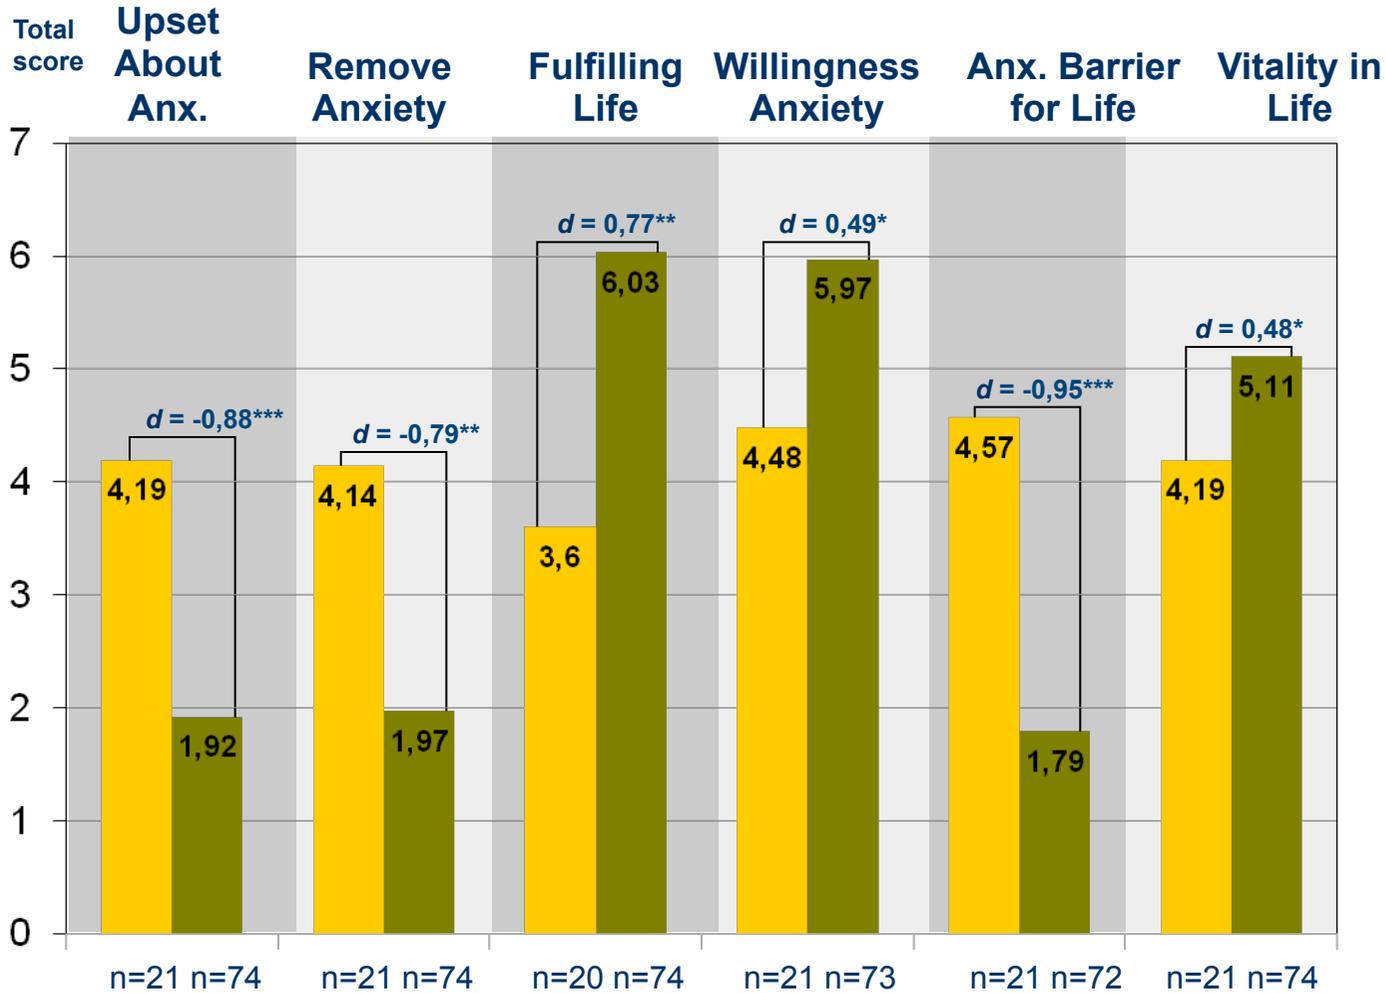

Psychological Flexibility/ Experiential Avoidance

As Measured at Post

Responders and Non-Responders: The Effect of Psychological Flexibility

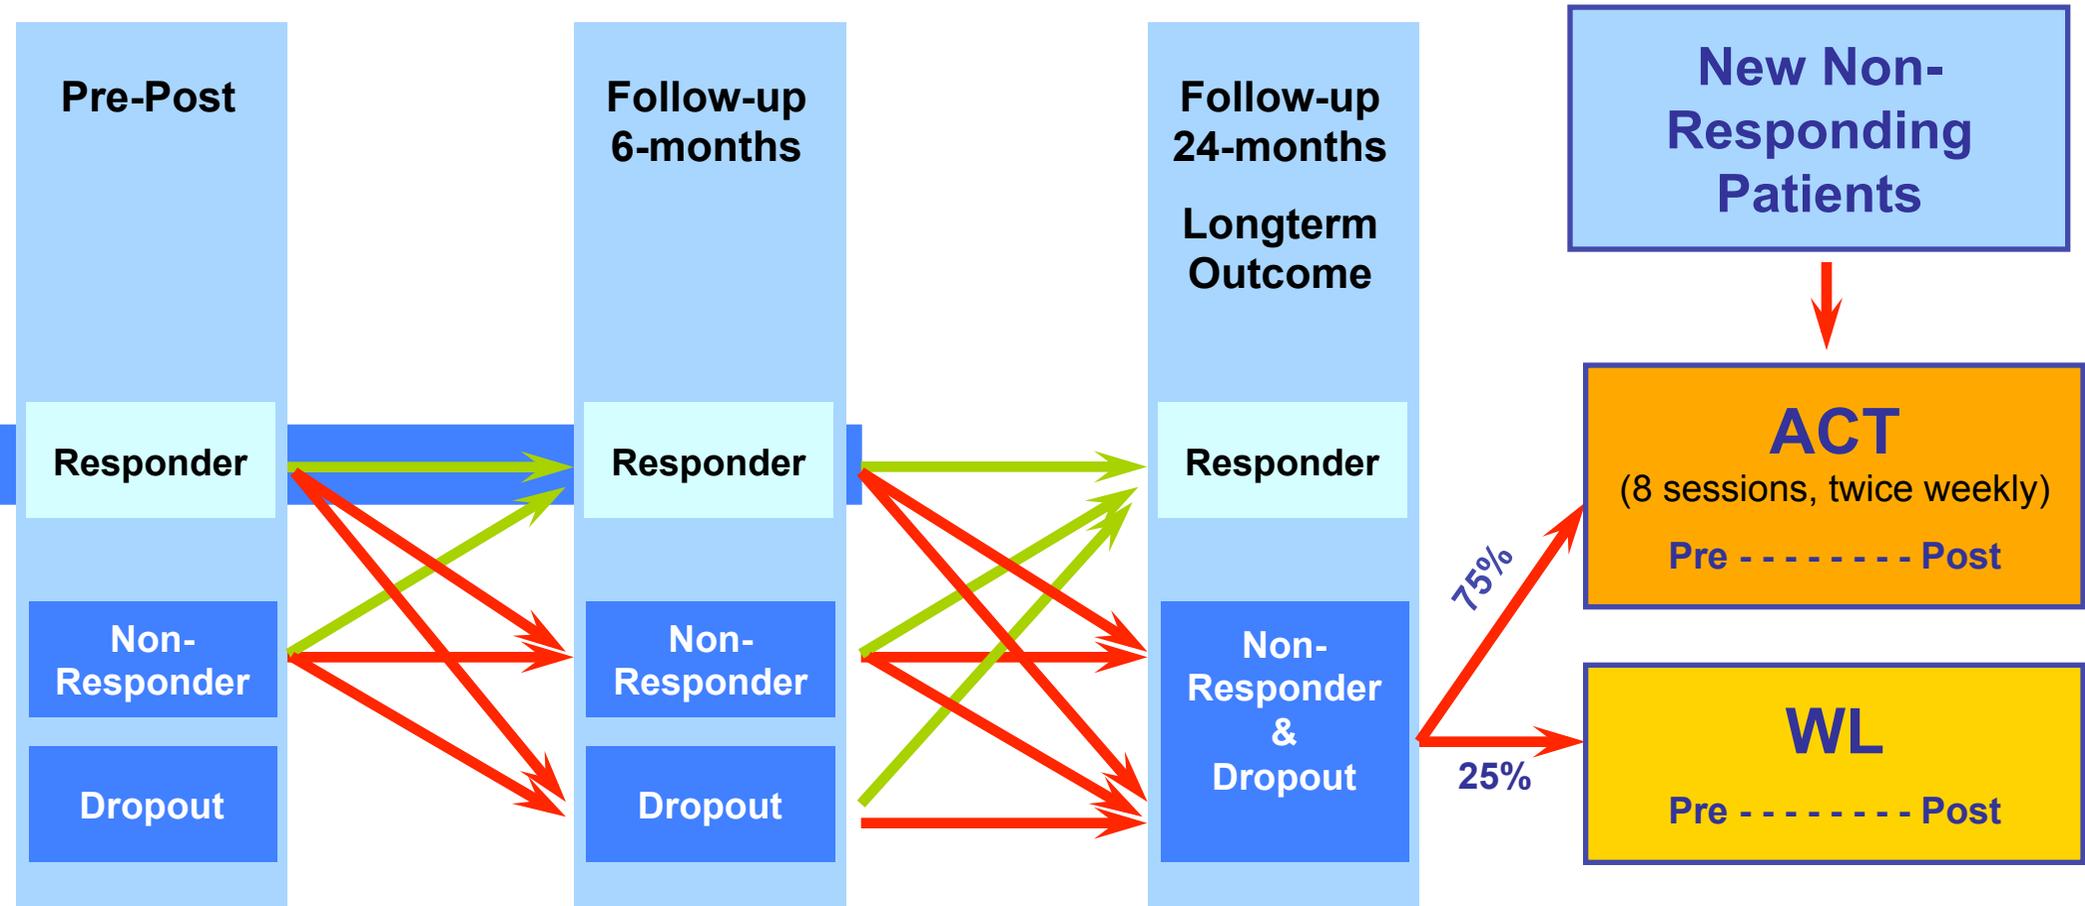

Effect Size Comparisons Across Facets of Psych Flex (F-ACT)

Items tapping into facets of **Psychological Flexibility** consistently differentiate „responders“ and „non-responders“

As measured at 2 Yr Follow Up

Non-responders and Relapse: Can an Acceptance-based Strategy Help?

Design and Methods

The study center & Therapists

Outpatient treatment center of the Technische Universität Dresden:

-Existing Trial Infrastructure

7 Graduate Student Therapists

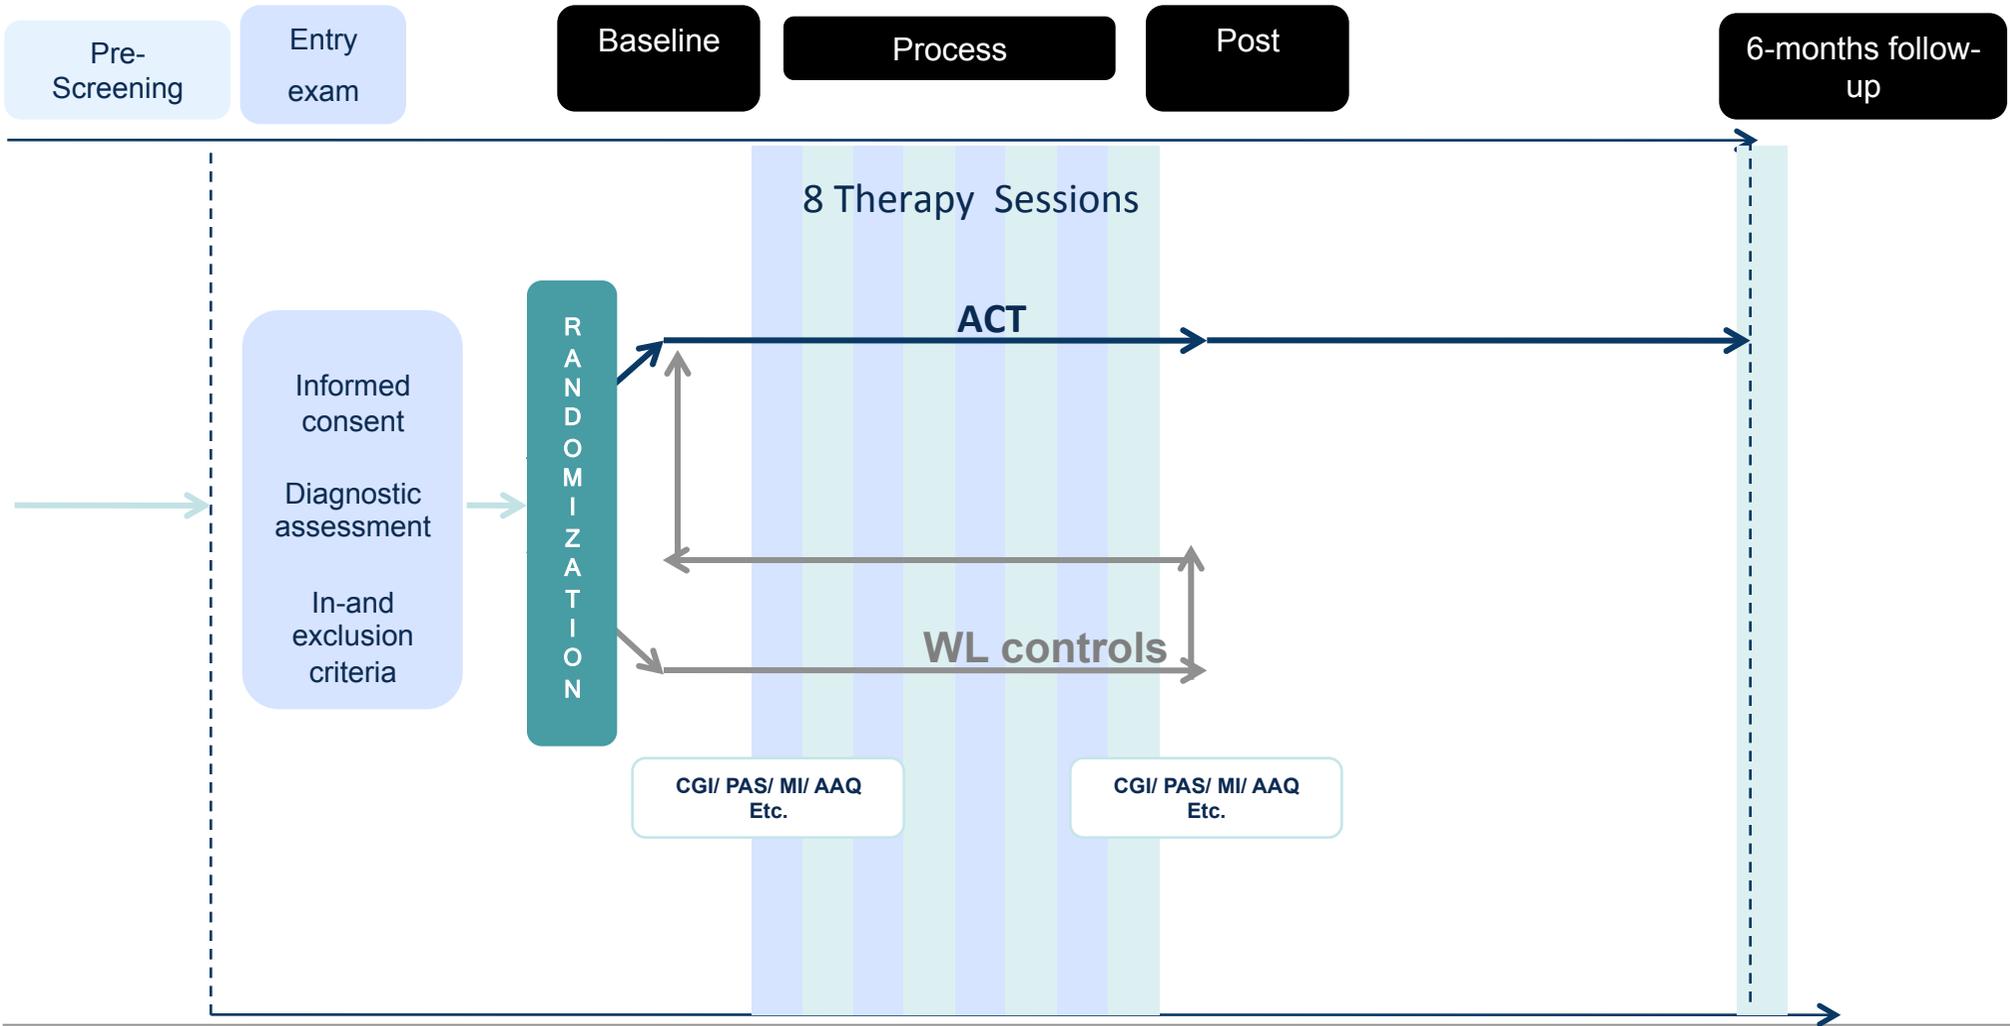

- No Previous Experience with ACT

-Trained and licensed as part of study's certification procedures

- Average 6 Pt/ Therapist

-Weekly supervision

Design and Methods

In- and exclusion criteria: Patients meeting DSM-IV-TR criteria for panic disorder with agoraphobia

Inclusion criteria

- Age 18-65
- DSM-IV Panic Disorder &/or Agoraphobia
- **Mobility Inventory ≥ 1.5**
- CGI-Score ≥ 4
- Ability to Attend Regularly
- Informed Consent
- **Adequate Previous Treatment**

Exclusion criteria

- Significant medical (somatic/mental) conditions
- acute suicidality
- DSM-IV Bipolar Disorder
- DSM-IV Psychotic Disorder
- DSM-IV Borderline Personality Disorder
- current psychological treatment for an axis I-Disorder
- current alcohol-, BZD-, drug dependence

Adequate Previous Treatment

- ≥ 20 Sessions of Psychotherapy
- Consisting of Elements of Empirically Supported Treatments

And/ or

- ≥ 4 Months of Prescription of Substances Approved by the Official Pharmacology Guidelines of the German Physician Society
- At sufficient Dosage

Sample

- **N = 43 Individuals; 51 Cases (10 WL delayed patients)**
- **Sex: 69.8% Female**
- **Mean Age: 37.2 y.o. (SD = 9.3)**

- **Adequate Previous Treatment:**
 - **Psychotherapy: 88.4% (38/43)**
 - **Pharmacotherapy: 32.0% (14/43)**
 - **Both: 20.9% (9/43)**

- **At Least Sub-Adequate Previous Treatment:**
 - **Psychotherapy: 95.3% (41/43)**
 - **Pharmacotherapy: 48.8% (21/43)**
 - **Both: 51.1% (22/43)**

**Mean
42.2 Sessions!**

Design and Methods

The Treatment

Session 1 Control is the Problem, Values	Week 1
Session 2 Acceptance, Control is the Problem, Mindfulness	
Session 3 Mindfulness, Acceptance/ Willingness, Values	Week 2
Session 4: Defusion, Mindfulness, Values, Self-as-Context	
Session 5 Defusion, Self-as-Context, Willingness, Values, Commitment	Week 3
Sessions 6-7: Defusion, Willingness, Values, Commitment	
Sessions 8: Defusion, Willingness, Values, Commitment, Relapse Prevention	Week 4

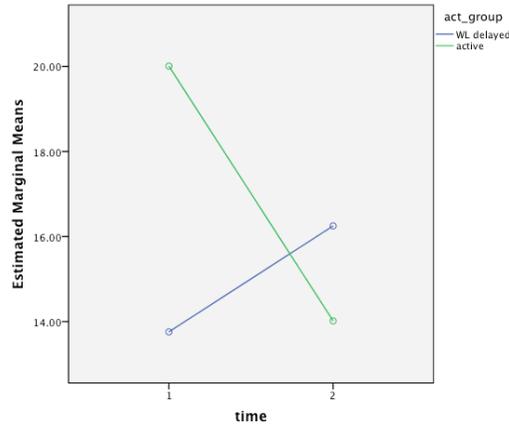

Preliminary Results

Outcome (Pre – Post vs. WL)

Primary Outcome Measures

Primary Outcomes

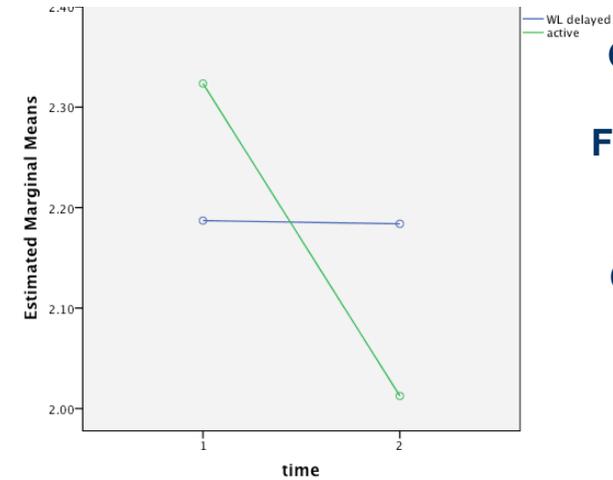

Panic and Agoraphobia Scale (PAS)

Group x Time Interaction:
 $F(1, 40) = 6.7, p < .001$

Cohen's $d = 0.7$

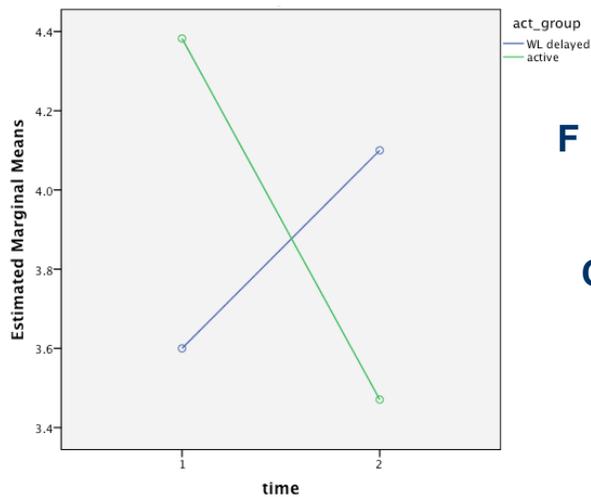

Agoraphobic Avoidance (MI)

Group x Time Interaction:
 $F(1, 36) = 2.0, p < .07$

Cohen's $d = 0.5$

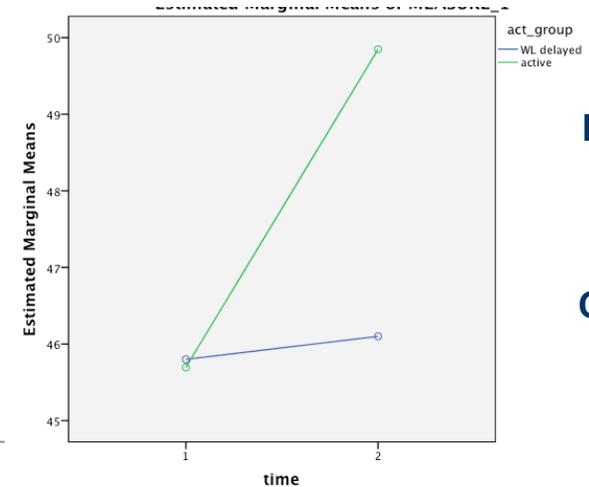

Clinical Global Impression (CGI)

Group x Time Interaction:
 $F(1, 42) = 13.7, p < .001$

Cohen's $d = 0.9$

Psychological Flexibility (AAQ-II)

Group x Time Interaction:
 $F(1, 44) = 1.3, p < .13$

Cohen's $d = 0.4$

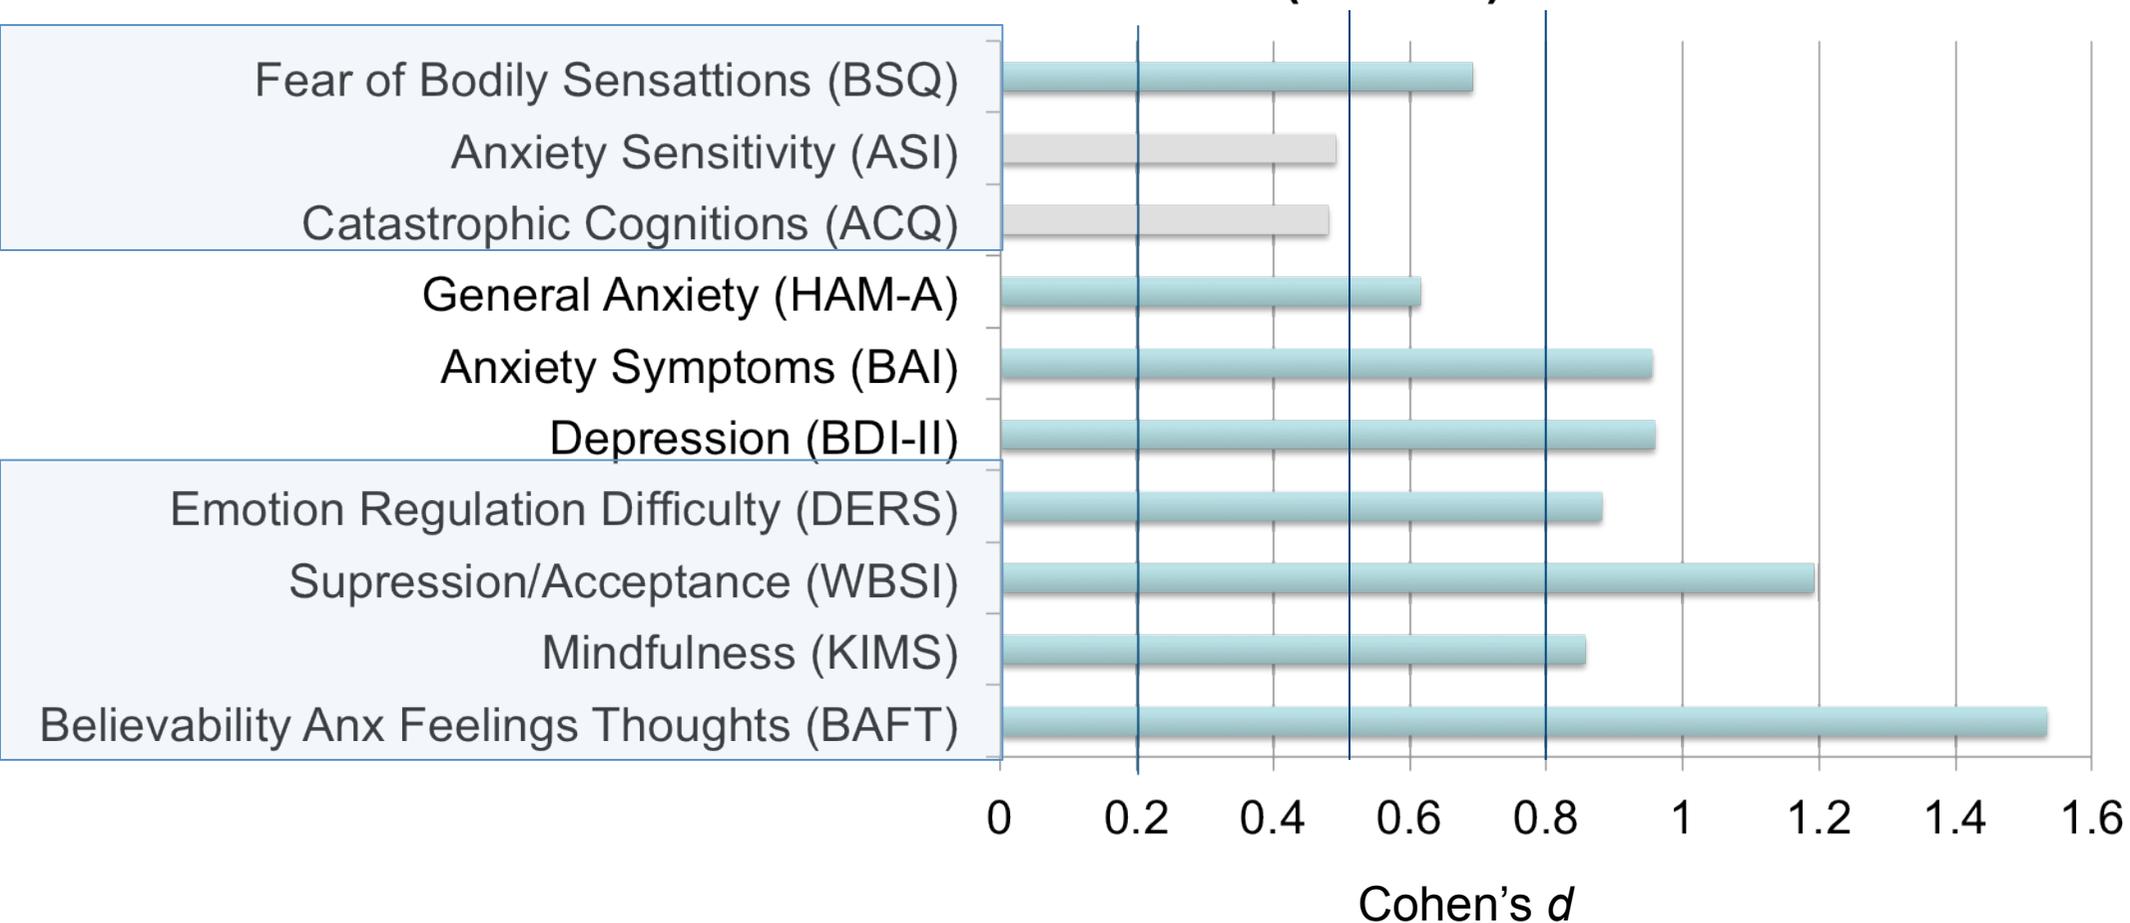

Preliminary Results

Outcome (Pre – Post vs. WL)

Secondary Outcome Measures

- Symptomatology*
- Non Targeted Constructs*
- Targeted Processes*

Controlled Effect Size (vs. WL)

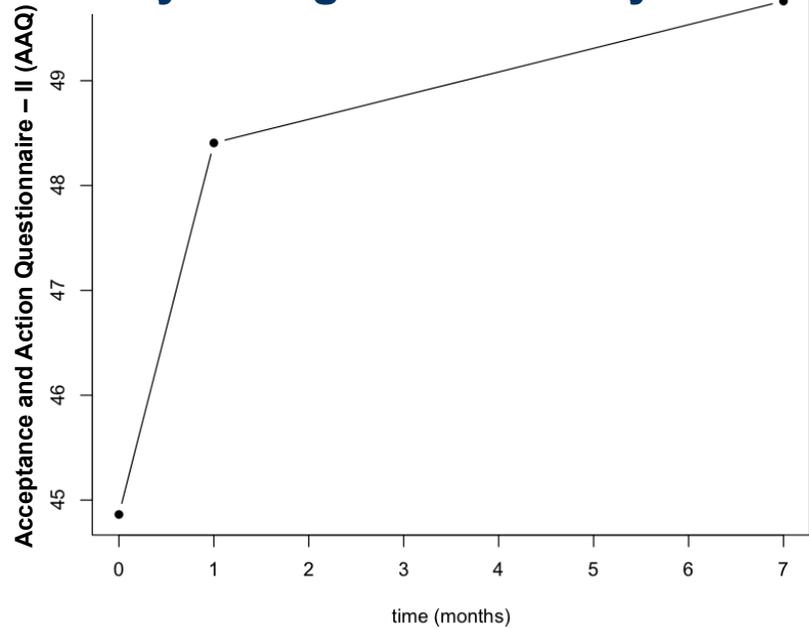

Preliminary Results

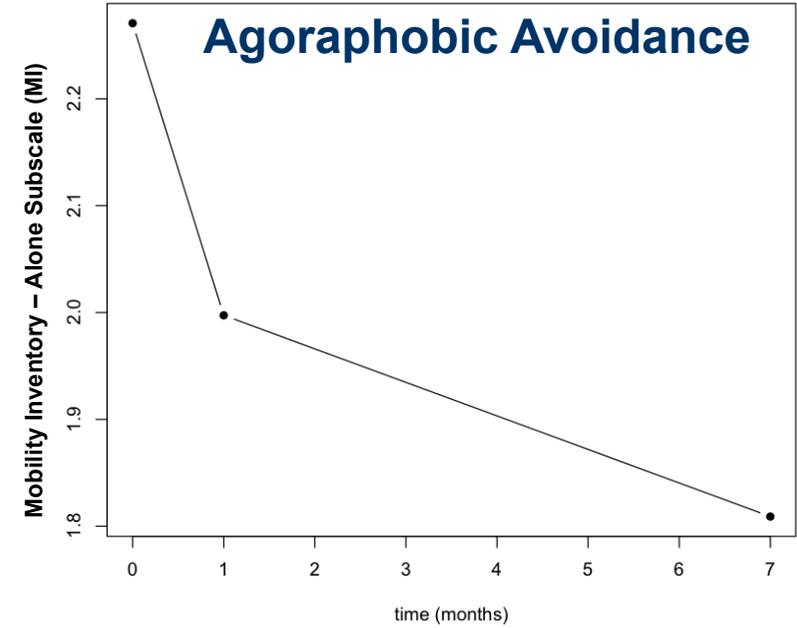

Follow-Up (6 Months)

Primary Outcome Measures

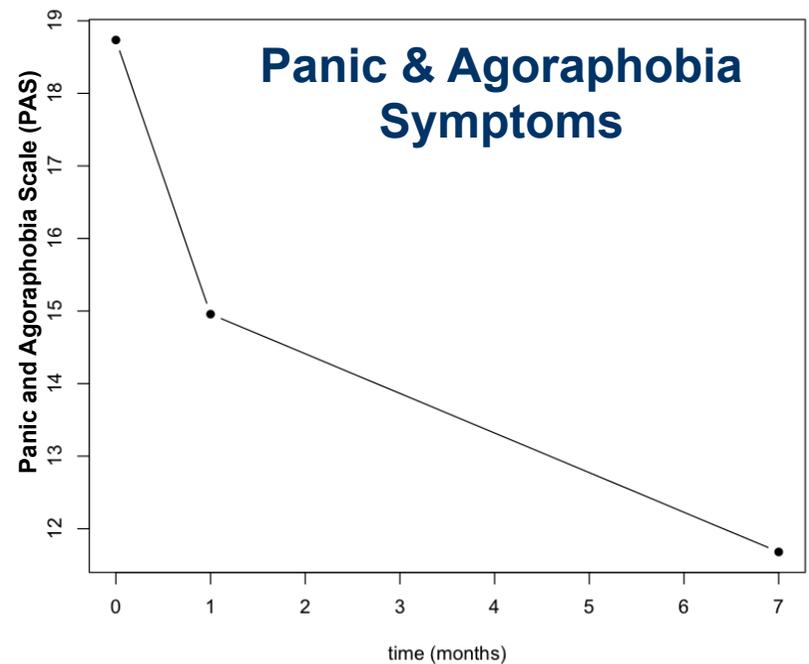

Psychological Flexibility

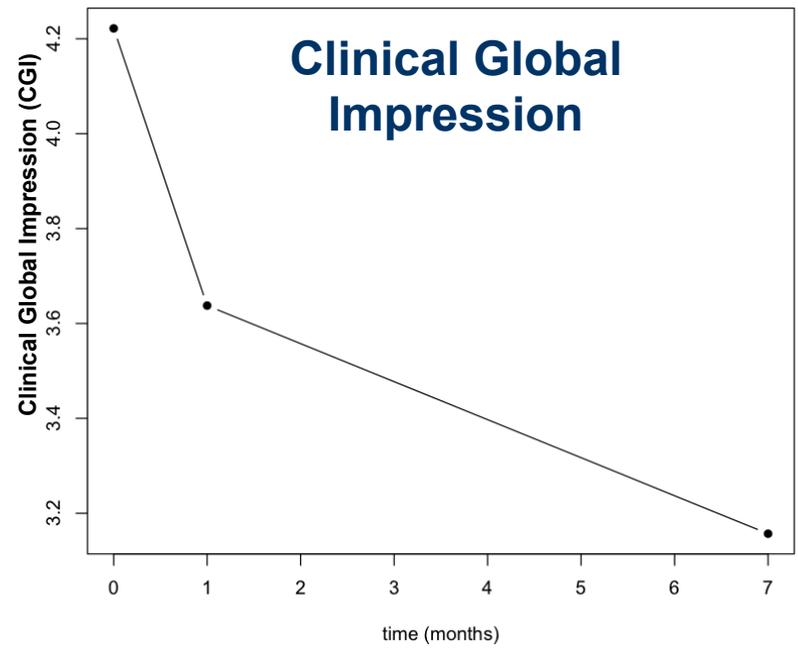

Agoraphobic Avoidance

Panic & Agoraphobia Symptoms

Clinical Global Impression

...and One More Thing

Drop Out Rate:

- **Overall: 5 Patients (9.4%)!**
- **“Real Rate”: 3 Patients (5.6%)**

Timing of Drop Out	Frequency
Prior to Session 1	1
After Session 1	1
After Session 3	1
After Session 5	1
After Session 8 (No Post)	1

...and the Response Now?

Response Rate:

Panic & Agoraphobia Symptoms		Clinical Global Functioning	
Post	6-Month Follow Up	Post	6-Month Follow Up
70%	80%	57%	52%

Conclusions

Where We Stand

- **ACT (Psychological Approach) Appears Feasible for Treating Refractory Patients**
 - ...with longitudinal stability
 - ...in a tough crowd
 - ...using therapists with no prior ACT experience
 - ...in 4 weeks
 - ...with a manual
- **Mindfulness-based approaches may be especially useful for patients with moderate to severe depression (Arch & Ayers, 2013)**
- **There is Hope for the “Hidden Third”**

More Work Lies Ahead

- **Session-by-Session Process**
- **Detailed Response Analysis**
- **Other Disorders**
- **Longer Follow-up**
- **Different Control Groups**

The MAC Study Network

Funding/Support: This work is part of the German multicenter trial “Mechanisms of Action in CBT (MAC)”. The MAC study is funded by the German Federal Ministry of Education and Research (BMBF; project no. 01GV0615) as part of the BMBF Psychotherapy Research Funding Initiative.

Data Access and Responsibility: All principle investigators take responsibility for the integrity of the respective study data and their components. All authors and co-authors had full access to all study data. Data analysis and manuscript preparation were completed by the authors and co-authors of this article, who take responsibility for its accuracy and content.
